The number of students earning bachelors degrees in physics has tripled in the last 20 years, thanks in part to a call for action put out by AIP to increase the number of physics majors (called the SPIN-UP Report). However, the number of African American physics majors has not changed during this time. AIP conducted another investigation called the TEAM-UP report, challenging physics departments to double the number of African Americans earning a bachelors in physics by 2030.

Workshop participants will discuss results from the TEAM-UP report and will collectively suggest changes in structure, practices, and mindset to better support African Americans in physics.
